

Inbal Gilead

I'm a product leader with a deep data edge,
helping teams build smarter, faster, and more
confidently.

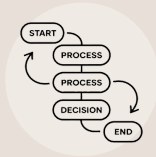

Contact me

ABOUT ME

With years of working directly with cross-functional teams, my expertise turns complex data and product challenges into clear, actionable solutions.

I've led high-performing teams, fostering collaboration across product, data, and engineering, with a strategic lens on product-market fit, operational efficiency, and go-to-market readiness.

Product First

I've led product from zero to scale. I don't just build what's possible, I build what matters.

Data Deep

I've worked with data from all & every angle: modeling, engineering, analytics, ML, AI, and culture

First Principles Thinker

I've worked across startups, scale-ups, and mature orgs; internal tools and customer-facing platforms. I bring pattern recognition from many corners of the tech world.

Practical Partner

People call me when they need clarity, momentum, and someone who just gets it.

SERVICES

As an independent product and data strategy consultant, I work with organizations to unlock clarity, focus, and forward momentum in complex environments.

What I can help with:

Data-driven culture & AI Adoption

Guiding teams through the strategic, cultural, and operational steps required to use data & AI effectively across the org

Building high-performing product orgs

Helping leaders structure teams and processes that serve their orgs

Productizing data & AI

Working with data or AI product and engineering teams to turn complex systems into scalable, business-aligned product capabilities

Whether it's a big strategic shift or a specific challenge you're facing, I'm always happy to contribute my perspective and help you think it through.

SESSIONS & WORKSHOPS

I care as deeply about learning and fostering talent as I do about building great products and data-driven organizations. I offer hands-on, high-impact workshops designed to help teams level up their thinking, decision-making, and collaboration. *Each session is tailored to the specific team and context* - because while the core concepts are widely valuable, the impact comes from making them truly practical and relevant to the people in the room.

The Data Advantage: Building Skills for Product Managers

An actionable half-day workshop on using data to make better product decisions – focusing on metrics, hypotheses, and intuition to solve real-world product challenges.

Planning Inspiration

A facilitation-driven workshop that guides leadership teams through strategy, prioritization, and roadmap creation. Throughout the workshop, I share my philosophy on prioritizing outcomes over tasks, aligning on success definition from day 1, and more.

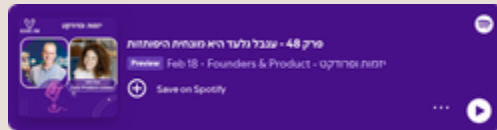

I also deliver tailored talks and learning sessions on topics across product, data, and leadership. **Recent sessions include** *The Future of Analytics, The Subtle Art of Killing Products, What is a Data Product Manager?*, and more.
